

Last Chance to Get Your FREE 2010 Architect's Sq. Ft. Costbook

Dear Mike Luke,
Mountainlands Area Plan Rooms

Just released the *2010 Architect's Square Foot Costbook* -- Included when you subscribe to DCD.

Today you need every resource to bring business in the door. When business knocks you can quickly answer with confidence, "How much will this cost?" before any plans are drawn with your DCD subscription. DCD is also a tool to investigate new areas of business and a means to make sure your own estimates hit the mark. DCD is much more than a subscription delivered to your door.

Now through November 30, 2009 you will receive the 2010 Architect's Square Foot Costbook Free with your subscription to DCD!

Your DCD subscription includes access to the DCD Archives. The Archives is a quick moving database of 1,300 actual projects of all types - LEED®, Schools, Hospitals, Pre-Engineered, Tilt-Up, and more submitted by your peers. The projects reflect the actual cost to build - not an estimated cost, national average or hypothetical cost. You can select from any of these projects and by using DCD's proprietary cost escalators and regional modifiers, generate new cost models for today, tomorrow or 5 years from now. You can also:

- Change square footage of any project
- View expanded cost data on a project
- Add, remove or modify a cost division or cost subdivision
- Save a project online for later use
- Print capabilities

A one year subscription to DCD is \$149 however, when you begin your subscription today you can add an additional year for only a penny more. A subscription with all of the additional functionality described above for two years is \$149.01.

Free *Architect's 2010 Sq. Ft. Costbook* When You Subscribe to DCD

The *Architect's 2010 Sq. Ft. Costbook* has just been released. You can purchase the cost book for \$58.95 or get it for FREE when you subscribe to DCD for two years.

Developed by Design & Construction Resources in partnership with McGraw-Hill Construction, publisher of Architectural Record, the *2010 Architect's Square Foot Costbook* makes it easy for you to forecast the square-foot cost of new construction or estimate the impact of modifications and enhancements on your existing projects. Many of the case studies presented in this 2010 Edition feature significant green building strategies as indicated by the LEED Rating System. In addition to detailed costs for all of these projects, you also get an extensive section with unit-in-place costs, regional cost adjustment factors and a convenient, fast-reference index. It is a must have reference for your office.

Don't miss this limited-time opportunity...

Subscribe today to DCD and have access to the DCD Archives with expanded functionality, get the second year for a Penny, and receive the *2010 Architect's Square Foot Costbook* FREE - all for \$149.01! The book alone lists for \$58.95.
